PROJECT	ON-CALL ARCHAEOLOGICAL AND PALEONTOLOGICAL SERVICES
CLIENT	UNDISCLOSED ORGANIZATION
LOCATION	LOS ANGELES, CA
INDUSTRY	EDUCATION
SERVICES	FACILITIES DEVELOPMENT

THE CHALLENGE

When an undisclosed organization undertook the largest educational building expansion and development program in their history and in the nation, they needed a seasoned technical team to offer pre-construction recommendations and monitor the project. With an experienced staff and cost-effective solutions, FirstCarbon Solutions (FCS) was the leader among consultants.

The Client was faced with a critical need to provide new school facilities throughout the district, which would accommodate students at all grade levels. FCS worked on four projects across the school district, including performing Air Quality Analysis, Cultural Resources, Noise Assessment and Traffic Analysis. FCS' assessment included the environmental setting and associated impacts of the proposed projects, as well as mitigation measures designed to reduce significant impacts within acceptable levels.

OUR SOLUTION

These four projects helped to expand the new series of school facilities. FCS' time spent was focused on minimizing any substantial environmental effects; the FCS team watched the construction sites for any signs of archaeological and paleontological impacts, and met the Client's specific daily reporting requirements. As such, any issues that were found were promptly addressed.

Our experienced staff knew when the mitigation-management requirements were met, and were therefore able to save more than \$50,000 of potential costs for the Client.

THE FCS ADVANTAGE

FCS values our surrounding communities and those who thrive in them. We take pride in protecting the past and future of a community and its citizens, including those who will grow up to see the future effects of our environmental efforts.

FCS takes an interest in our clients and their values, and prioritizes each project to ensure it is executed thoroughly and completely from start to finish. Accordingly, our staff developed personal relationships with each school facility project manager before and during our work efforts in the field. In addition to our quick and responsive protocol, the bond that FCS formed with the project managers helped reduce project-related and future expenses for the Client.

DELIVERABLES AND RESULTS

Saved more than \$50,000

Reduced future expenses

Documented pre-construction recommendations

Completed project-specific mitigation monitoring work effort

Delivered daily reports to Client
